Dear Joseph:

My name is Shawn Albrecht, I am currently a field supervisor for MBR Construction Company. Recently my company was awarded a contract by the Railroad Museum Of Pennsylvania to do some HVAC renovation work. I am a journeyman sheet metal worker with years of experience in the installation of spiral air ductwork with and without transverse joint gaskets. Our customer has hired us to install such an air duct system in the area where the priceless antique trains are on display. We have to work around the existing trains as they cannot be moved, with this challenge at hand we need a spiral ductwork system that is quick to install, limiting the time spent working above the antique trains. We needed a reliable seal and a clean, finished appearance.

I had recently seen an ad for Sure•Seal Spiral™ ductwork by Langdon Inc. so I decided to give them a call. I was put in contact with Joseph Sandman, he explained how Langdon's gasket spiral ductwork system differs from other comparable products on the market, including the location of the transverse gasket and placement of the fastening screws. The low leakage rate and quality of the spiral ductwork makes Langdon's product superior. The gasket location and the fact that the fastening screws are located in front of the gasket rather than behind the gasket, as all the other gasketed systems are. This system seals very well, we actually had some difficulty getting a leakage rate when we tested the system.

The installation was also very quick and simple, with the ability to install the spiral air ductwork without the use of mastic sealers and the clear instruction of where to locate the fastening screws, we were able to install this spiral ductwork much faster than the traditional slip connection system that requires the use of mastic sealers. The ductwork fit together simply and precisely, also the system has a nice finished appearance. I have taken the time to write this testimonial because I wanted you to know that you helped us with a difficult task and we feel your Sure•Seal™ product is superior in quality and design. We saved money and were able to provide our customer with a quality product.

Sincerely,

A handwritten signature in blue ink, consisting of a series of loops and a long horizontal line extending to the right.
